HITACHI ZW30 T4F COMPACT LOADER MAKES ITS DEBUT .5 cu. yd. LOADER, SIMPLE, SAFE AND PRODUCTIVE

Newnan, GA – Hitachi Construction Machinery Loaders America Inc. (HCMA) announced the debut of the ZW30 T4F compact wheel loader recently. The Hitachi compact loaders have earned a reputation for being compact, but easy to operate, and safe. “I am very happy that we made the investment to have a closed cab. I am sure I will appreciate it even more as winter settles in. The cab is very comfortable, yet still offers tremendous visibility” stated Carmine Capobianco, of Big Valley Nursery.

The ZW30 features an even half cubic yard bucket making it ideal for landscape supply operations, nurseries, and other applications calling for precise measurements. However, like its larger Hitachi loader counterparts, the ZW30 handles snow and clean-up operations equally as well. The Kubota engine is powerful and reliable. In conjunction with the responsive hydrostatic transmission, limited slip differentials, and rear axle oscillation, this compact loader handles and travels well, no matter how tough the terrain.

In addition to the smooth operation, operators will appreciate the cab environment. Excellent visibility, standard air conditioning, adjustable suspension seat, and easy-read dashboard monitor panel.

Additional standard equipment, a universal quick coupler, sliding windows on both doors, access on both sides of the cab with easy access steps, and automatic parking brake system.

Overall, the ZW30 T4F provides a powerful and light footprint with a compact body. Durability, comfort, and safety have also been engineered into this compact, designed to satisfy both experienced and inexperienced operators.

Importantly, all the Hitachi compact wheel loaders are Tier 4F certified with only a DOC to control emissions. What does all that all mean? It means SIMPLE. With the Hitachi compact loaders, there are no complex and expensive emission DPF filters to plug, regenerate, maintain, or replace. And no SCR to feed with DEF. This further sets Hitachi apart from many other compact loader offerings. Plus, longer maintenance intervals with standard 500 hours engine oil changes and Hitachi’s patented HN oil impregnated bushings offer forgiveness if the operator missed a pin greasing service.

These Hitachi compact wheel loaders can offer as much as 10 times the tire life of skid steers and track loaders. Furthermore, these compact wheel loaders save 1/3 the fuel cost and will continue to be productive and long outlive those other machines, in some cases by a factor of 2 or 3 times. All that cost savings goes directly to your bottom line. Hitachi delivers dump heights, bucket loads, travel speeds and visibility that other machines cannot touch. With all those benefits, Hitachi compact wheel loaders will pay for themselves in fuel, tire, and life expectancy many times over.

For your best value proposition in the marketplace, it is SIMPLE – Hitachi compact wheel loaders.

About Hitachi Construction Machinery Loaders America Inc.

The commitment of Hitachi Construction Machinery Loaders America Inc. (HCMA) to the North American market is significant. With manufacturing facilities in Banshu and Ryugasaki, Japan, and Newnan, Georgia, Hitachi Construction Machinery Loaders America offers outstanding parts availability, an unmatched factory component exchange program, customer and dealer training programs, and a wide range of services and programs, providing outstanding support for Hitachi wheel loaders. The HCMA team is focused on wheel loaders, and only wheel loaders. Backed by the global strength of Hitachi, Hitachi Construction Machinery Loaders America Inc. is poised to make a major impact on the wheel loader market in North America.
